- School of Medicine, Chung Shan Medical University, MD.

• Career and certification:

- Clinical Lecturer, National Taiwan University School of Medicine.
- Attending Physician, Department of Internal Medicine, National Taiwan University Hospital Hsin-Chu Branch.
- Fellow, Department of Internal Medicine(Hepatobiliary and Gastroenterology), National Taiwan University Hospital.

• Reminder from Dr. Hsu:

- The incidence of colorectal cancer in Taiwan increased year by year. A person with an average risk of colorectal cancer has about a 5% chance of developing colorectal cancer overall; however, colorectal cancer can be prevented. There was a more than 50% risk reduction in overall CRC mortality, as long as we regularly receive screening for colorectal cancer. Moreover, with

healthy lifestyle, you can get away from the threat of colorectal cancer.

Whether you have a family history of colorectal cancer or not, you may be diagnosed with colorectal cancer. Screening is the most effective way to fight colorectal cancer.
