- Fellow, Department of Oncology, National Taiwan University Hospital
- Resident, Department of Internal Medicine, National Taiwan University Hospital

• Reminder from Dr. Chen:

- Breast cancer has increased a lot in young adults in Taiwan. However, breast cancer is a treatable disease, especially when we discover it early and treat it early. The treatment

outcome has also improved a lot in recent decades. Even in advanced stage IV breast cancer, it still can be controlled by adequate treatment. Therefore, please don't delay your treatment because of fear or unnecessary worries. Herbal or home remedies will not help your breast cancer, but adequate treatment will!
