• **Career and certification:**

- Attending Physician, Department of Internal Medicine, National Taiwan University Hospital Hsin-Chu Branch.
- Fellow, Gastroenterology and hepatology division, Department of Internal Medicine, National Taiwan University Hospital.

• **Reminder from Dr. Chen:**

- Inflammatory bowel diseases are lifelong diseases caused by a combination of factors including genetics, environment, diet and other factors. Symptoms include long-term unexplained abdominal pain, diarrhea, bloody stools, and even anemia. In recent years, patients with inflammatory bowel disease have increased in all parts of the world, including Taiwan. As the treatment has made great progress, if the patients can

cooperate with the medical team to confirm the diagnosis and start the appropriate treatment as soon as possible, it is possible for us to effectively control the disease and avoid serious complications and improve the long-term quality of life.
