• **Reminder from Dr. Yang:**

Due to the stressful lifestyle and career of our modern society, we often neglect marriage and child-bearing until later in life. This choice, intentional or not, is often in conflict with our reproductive physiology. Even with the optional advanced modern medical care, we are still unable to rewind the biological clock. The success rate of assisted reproductive techniques (ART) depends primary on the age of the female partner. Therefore, if child-bearing is an important consideration in your life, it is best to start early or to have a comprehensive fertility preserving plan
