## Reminder from Dr. Tsai:

Compared with other cancers, breast cancer is a disease that can be diagnosed and treated early. The benefit of early detection of breast cancer is a high cure rate. It is recommended that female friends perform regular self-examinations every month, examination by breast specialist every year after the age of 35, and receiving mammography at least once every 2 years after the age of 45. Please seek medical advice as soon as possible if there is any abnormality.
