

Chia-Chun Wang

• Current position:

- Attending Physician Division of Radiation Oncology,
Department of Oncology, National Taiwan University
Hospital

• Specialty:

- Radiation oncology
- Genitourinary cancer
- Breast cancer

• Education:

- PhD, Institute of Epidemiology and Preventive Medicine,

National Taiwan University

- MD, College of Medicine, National Taiwan University

• **Career and certification:**

- Research fellow, Massachusetts General Hospital and Harvard Medical School
- Attending Physician, Department of Oncology, National Taiwan University Hospital, Yunlin Branch

• **Reminder from Dr. Wang:**

Radiotherapy, systemic therapy, and surgery are the main treatment modalities for cancer. The choice and combination of these modalities need multi-disciplinary discussion between physicians/surgeons and the participation of patients. Feel free please to raise any questions and discuss with your doctors. We will appreciate your participation. The course of radiotherapy usually takes weeks. Since we are treating cancer with radiation, no obvious sensation will be noted during each fraction of treatment. Side effects will

occur, however, during the treatment course. Physicians will alleviate the side effects with drugs or other methods and help patients complete radiation treatment.
