

## Yi-Hsin Yen

### • Current position:

- Attending Staff, Department of Dentistry, National Taiwan University Hospital.

### • Specialty:

- General Dentistry
- Endodontics

### • Education:

- DDS, School of Dentistry, China Medical University.

## • **Career and certification:**

- Chief Resident, Department of Dentistry, National Taiwan University Hospital.
- Resident, Department of Dentistry, National Taiwan University Hospital.

## • **Reminder from Doctor Yen:**

The dental caries rate among Taiwanese people is higher than the global average, and many of these severe caries invade the pulp chamber, causing subsequent pain, infection, and even cellulitis. It is crucial to remind people that prevention is better than cure. In addition to strengthening oral hygiene, regular examinations are also required. Early detection and treatment can reduce the discomfort caused by pulp inflammation and infection, avoid subsequent complicated treatment, and improve

the quality of life.
