National Taiwan University Hospital

• **Reminder from Dr. Lin:**

In recent years, many thyroid-related diseases, such as thyroid nodules or thyroid dysfunction, are often accidentally discovered due to the prevalence of health check-ups, causing many people to feel panic. In fact, thyroid diseases are very common. As long as abnormalities are found early and medical attention is sought, the doctor will arrange appropriate evaluation and explain the treatment and follow-up plan. Most cases are benign and can be cured after treatment. So if it is detected and treated early, many people can live peacefully with thyroid diseases and still have wonderful lives!
