• Specialty:

- General Anesthesia
- Nerve Blocks
- Pain Management

• Education:

- M.D., College of Medicine, Taipei Medical University

• Career and certification:

- Attending Physician, Department of Anesthesiology, Taipei Medical University Hospital

• Reminder from Dr. Hsu:

Dear Patient,

Are you still suffering from the burning, electric shock-like nerve pain that lingers after a shingles infection?

Please be aware, this could be a sign of postherpetic neuralgia (PHN). If treatment is delayed, this acute pain can become a stubborn, chronic condition, leaving the brain's pain alarm

system stuck in the 'on' position.

Please seize the "golden window" for treatment—the first 1 to 3 months after the rash appears—and seek help from a pain specialist immediately. We offer more than just oral medications. Through interventional therapies like nerve blocks and pulsed radiofrequency (PRF) therapy, we directly repair and stabilize the affected nerves.

Don't just endure it. Seeking early treatment is the key to avoiding long-term suffering and taking back control of your life!
